(0774)**

**Serving Michigan
and surrounding
areas.**

Our Process

Emergency Leak Response

Initial consultation and investigation to gather information necessary to provide accurate and practical recommendations.

Interior Roof Leak Investigation

Experienced technicians isolate immediate problem area(s) inside the facility first.

Exterior Roof Investigation

Roof evaluations provide our technicians and consultants with information that indicates the roof areas (sections) that are candidates for an infrared moisture survey (thermal imaging), and those areas requiring immediate action repairs.

Immediate Action Recommendations

Immediate, aggressive action (planning immediate long-term repairs) on the correct areas reduce capital expenses, while increasing the longevity of the existing roof system.

Proactive Maintenance Solutions

Fact-based, practical maintenance budget processes help clients prepare for necessary repairs over a three-year period.
